

# Electronic Data Capture using

## MACRO

A. Fischer (Munich / Germany)

### Abstract:

This workshop is intended to demonstrate handling a clinical trial with the software MACRO.

First an overview of the application capabilities and the actual development state is given. Then the functionality of the major MACRO working modules is presented and an example implementation is shown.

Following this introduction, the constraints on trial implementation imposed by MACRO are discussed. The process of implementing trial EDC is laid out along with estimates of time and effort.

Finally, data interfaces to statistical software are briefly presented.
