

Öffentlicher Titel	Sterile Entzündung und molekulare Aberrationen bei MDS
Wissenschaftl. Titel	Sterile Inflammation and Molecular Aberrations in Myelodysplastic Syndrome: Determinants of Quality of Life and Vulnerability
Kurztitel	InflamGen
Studennummer KN/ELN	LN_NN_2020_717
Studiengruppe	NN
Studienart	Beobachtungsstudie
Studienphase	nicht zutreffend
Erkrankung	Myelodysplastisches Syndrom (MDS) - Alle Subtypen
Leukämiestadium	.
Einschlusskriterien	<ul style="list-style-type: none">- Female and male patients > 18 years- MDS, MDS/MPN diagnosis based on current WHO classification. CCUS and CHIP defined by Valent (Valent, Oncotarget, 2018) and by Stauder (Stauder, Blood, 2018)- Signed and dated declaration of consent by the patient according to ICH-GCP Guidelines
Ausschlusskriterien	<ul style="list-style-type: none">- Any other illness, whether physical or mental, or any laboratory abnormalities which prevent a declaration of consent by the patient- Patients with an acute and/or uncontrolled infection, including patients that are afebrile under treatment with antibiotic/antifungal/antiviral prophylactic medication- Any pre-existing autoimmune disease requiring a systemic immunosuppression- Steroid therapy (>10mg Prednison/day or equivalent), regardless of its necessity up to 4 weeks before inclusion in the study- Anamnestic and/or current therapy with hypomethylating agents (HMA) or immunomodulatory imide drugs (IMiDs)- Status post allogenic stem cell transplantation- Previous or ongoing chemotherapy- Pregnancy or breastfeeding period
Alter	>= 18 Jahre
Status	Aktiv
Beginn der Rekrutierung	18.03.2020
Sponsoren	Universitätsklinik Innsbruck (Hauptsponsor)
Registrierung in anderen Studienregistern	ClinicalTrials.govNCT04313231 (primäres Register)
